

Patient Chart Manager **The Doctor's Choice**

Prime's Patient Chart Manager provides 192 bit encryption and fully automated audit trail. All data resides on the server not on the client.

The screenshot shows two overlapping windows from the Prime Clinical Systems software. The background window is the 'Patient Chart Manager' and the foreground window is the 'Logon Password' dialog.

Patient Chart Manager

Physicians Inbox red flag up if new mail has arrived as well as audible notification

To sign a document and at the same time remove it from the physicians inbox the doctor simply right clicks and selects "Sign Doc".

The document always remains in the patient chart.

The screenshot shows the Prime Clinical Systems interface. At the top, there is a menu bar with options like Edit, Close, and various icons. Below the menu is a toolbar with icons for document management. The main window is divided into several sections:

- Patient Lookup - SearchType:** A search area with a text box and a dropdown menu set to "Name". Buttons for "View Pat Demo", "Create Chart", "Appt. History", and "Pt Data Tables" are visible.
- Navigation:** Buttons for "Alphabet", "Prime Clinical", "Scheduler", and "Appointments".
- Patient List:** A table with columns: Last Name, First Name, D.O.B., SSNum, MR, CL, Acct #, and Descri. The entry for "ANDERSON, JANET" is highlighted.
- Physician Inbox:** A section showing "Richard M Deits M.D. Inbox" with a "MyDocs" button.
- Document List:** A table with columns: Doc Date, Doc Type, Author-Signor, and Doc Com. A right-click context menu is open over the document dated "2004-05-06" with type "TMST". The menu options are: "Open Chart", "Close Inbox", "Sign Doc" (highlighted), "Remove from Mailbox", and "Help".
- Report Content:**
 - Header:** "SOUTH BAY WELLNESS CENTER" logo, "Anderson, Janet", "Record # 30086", "May-6-2004".
 - Section:** "TREADMILL STRESS TEST".
 - Diagnosis Table:**

#	ICD9	Description	Comment
1	428.0	Congestive Heart Failure Uns	
 - Text:** "After obtaining baseline heart rate, blood pressure, and electrocardiogram, the patient was exercised on a treadmill using a standard Bruce protocol. The patient exercised a total of 11 minutes and 30 seconds after which the test was discontinued secondary to fatigue and reaching over 100% of maximal predicted heart rate for age. Maximum metabolic workload was outstanding at 10 METS. Maximum rate pressure product was 2000 at 100%. The patient's heart rate began at 100 and reached a peak of 160, which was above the 100% of maximal predicted of 150. The patient's blood pressure began at 120 and reached a peak of 180. The patient denied any anginal symptoms. There were no ectopic beats. There were no significant ST segment nor T-wave abnormalities appreciated."
 - Conclusion:**
 - This is a maximum exercise stress test demonstrating normal heart rate and blood pressure response to exercise with an excellent exercise capability.
 - There is no EKG evidence of subendocardial injury or ischemia at the exercise level attained.
 - The patient had no anginal symptoms.
 - There were no ectopic beats.
 - There is no old test for comparison.
 - Signature:** "%signature%"

Auto fill any form or document (H&P's SOAP notes or any internal forms .

Scan document then place yellow database fields into the form once.
