## **Procedure Pane Search Options**

#### Fix

The *Procedures* pane drop-down now has one key search capability like the *Diagnoses/Past Hx* pane drop-down. The search method (by code or description) is set in Misc User Options.

• Set the search method on the *Misc* tab of the *Options* window by selecting {Diag Code} or {Diag Desc} from the <Def Diag Pane Search Column> drop-down. NOTE: The search method selected applies to both the *Procedures* and the *Diagnoses/Past Hx panes*.

# **Recent PCM Additions & Updates**

Ver. 7.0.1620

### **California Parkinson's Disease Registry**

### New Feature

**CALIFORNIA CLIENTS ONLY:** PCM will automatically submit a full CDA to the California Parkinson's Disease Registry (CPDR) under the following circumstances: If the G20 or G90.3 diagnoses exist in a chart and the data has not been previously sent to the registry, the data is submitted upon checkout in PCM.

**PROMOTING INTEROPERABILITY:** Data submission to this registry can be used to meet the Public Health Registry Reporting measure of the Public Health & Clinical Data Exchange objective.

### **Daily Appointment List**

#### Fix

If there is a default facility set in the PCM clinic setup screen and there is a provider who is not mapped to the default facility (mapped to another facility instead), the provider will now show in the Provider drop-down.
