

## CASE STUDY

The Advanced Foot and Ankle Medical Center (AFAMC) is a 3 provider podiatry group based in Thousand Oaks, CA, with a total of 6 users, specializing in sports medicine, orthotic therapy, traumatic foot and ankle injuries, diabetic foot conditions, wound care, and all problems of the foot and ankle.

After reviewing several electronic health record solutions, Advanced Foot and Ankle selected Patient Chart Manager (PCM) because they were most impressed by the features and flexibility that PCM offered. They purchased PCM in April, 2003. Their biggest implementation challenge at that time was scanning in all of their charts. They felt that Prime Clinical made the implementation process easy and that because the system is user-friendly, it was easy to learn.

Because the practice outsourced their billing until May, 2011, they did not initially implement OnStaff Intellect, the practice management component of the system until mid 2011. Now they use the fully integrated solution.

AFAMC is satisfied with the final results. They appreciate the ease of use of the system, the flexibility which accommodates their specific needs, and the fact that Prime Clinical is open to suggestions .

Dr. Hurless attested for meaningful use and received his initial incentive funding in 2012., and the other providers will attest in the fall of 2012.

## PODIATRY

**3 Providers**  
**6 Users**  
**1 Location**

**Jeff Hurless, D.P.M.**  
**Hai-En Peng, D.P.M**  
**Brooke Gifford, D.P.M.**
